

"...within two to five days, the offensive odors are either completely absent or nearly eliminated...Zefir sprays are far superior to other deodorant agents...[in] fact...to date, no one that rented or leased a sprayed unit has complained of bad or offensive odors..."

*Jim A / Principal Broker
Residential Rental Brokerage*

"...[your] spray was effective beyond my expectations...the odors [in one unit] were so offensive and unhealthy that my property manager wouldn't enter...without a [special filter] mask...the occupants had smoked and had several pets...there was [animal] feces [and] urine...[a week after] treatment...the obnoxious odors were almost completely eliminated...the new renters have not complained..."

*Darin R / General Manager
Property Management Firm*

"...[three years ago] a cat sprayed [my car] with his scent...I...shampooed the upholstery, door panels, and rugs, all to no avail. I tried everything...cleaners and deodorants people suggested...the nauseating smell would always return...Much to my surprise [after I tried your ZefirFresh™ sample] within...days the smell seemed...no longer detectable...now...eleven months since I sprayed...the cat smell has not returned..."

How ZefirPro Works

ZefirPro™ employs a photocatalyst that captures light energy and uses that to convert organic matter into carbon dioxide and water. Even the light from an electric lamp is sufficient to trigger this safe, natural process.

A moisture and air catalyst works around the clock, even in the dark, to continue to oxidize organic matter, although more slowly than the photocatalyst. Silver ions complement the odor eliminating catalysts. A mixture of odor-reducing plant extracts with immediate effect and a temporary light citrus-like smell round out the specialized formula.

How to Use ZefirPro

ZefirPro is easy to apply and may be safely sprayed on nearly any substrate. Because ZefirPro is water-based and should only be applied to surfaces that would not be damaged by similar amounts of water. After application, the water will evaporate leaving behind a thin, transparent coating of odor-fighting particles. Maintenance consists of not covering up or removing the coated surface. Delphi Labs recommends reapplication after twelve months.

Effective and Safe

Laboratory tests of ZefirPro demonstrate its effectiveness against a variety of volatile organic compounds (VOCs), including formaldehyde, toluene and xylene. These tests have also shown that ZefirPro does not easily wash out of fabrics.

ZefirPro is safe to use in the home and around pets. Care should be taken during application not to inhale or ingest ZefirPro.

Where to Use ZefirPro™

Use ZefirPro™ in apartments or common areas or any rooms where smoke has accumulated over the years or where pet odors are offensive. You may also want to use in rest rooms or places where pesky odors plague your residents, potential renters or staff.
